

HIDIR Hazard Identification Workshop

*HIDIR = Hazard Identified,
Intervention Required*

Effectively Addresses The Issues of Marginal Risk Assessment and Hazard Identification in Today's Workplace!

THE PURPOSE:

To address the significant gaps revealed by current statistics regarding today's contractor workforce.

... 27% of craftworkers have less than 5 years job experience, 46% have between 5 and 10 years job experience

... 34% of today's workforce are between the ages of 18 and 32

... 21% are between the ages of 33 and 40

... 13% are between the ages of 41 and 47

To mitigate the fact that today's rapidly-growing workforce has received little or no risk-based, decision-making training prior to entering the workplace.

... 60% of the workforce has less than 6 months experience at their current jobsite

... 60% of incidents have poor decision-making as a root cause

... 45% of incidents have risk-taking as a root cause

THE WORKSHOP:

...uses real-life scenarios, current teaching methodologies and site-specific criteria to emphasize the need for proper risk assessment and hazard identification by all members of the workforce

...delivers tangible, easily understood and applicable risk-based decision-making processes to each and every member of the worksite, thereby enhancing their individual and collective opportunities for Safety Success.

The workshop facilitator has 37 years of experience in the Oil & Gas Industry. He has served in refining, production and exploration in both operational and managerial capacities. With the added advantage of a degree in Adult Learning from the University of Texas, he has applied his professional experiences and Adult Learning concepts to sharing the Safety message worldwide for the last 15 years of his career with a Fortune 100 industry major.
